Sequence 7, Application US/09060854B
Sequence 7, Application US/09060854B
Patent No. US20020081703A1
GENERAL INFORMATION:
APPLICAMY: Estell, David Aaron
TITLE OF INVENTION: Human Protease and Use of Such Protease for Pharmaceutical
TITLE OF INVENTION: Applications and for Reducing the Allergenicity of No. US2002
TITLE OF INVENTION: Proteins
TITLE OF INVENTION: Proteins
TITLE OF INVENTION: Proteins
TITLE OF INVENTION NUMBER: US/09/060,854B
CURRENT APPLICATION NUMBER: US/09/060,854B
NUMBER OF SEQ ID NOS: 1998-04-15
NUMBER OF SEQ ID NOS: 2007 Windows Version 3.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           RILDDGLGHGTFVAGVIASMRECQGFAPDAELHIFRVFTNNQVSYTSWFLDAFNYAILKR
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   PNIKRVTPQRKVFRSLKYAESDPTVPCNETRWSQKWQSSRPLRRASLSLGSGFWHATGRH

This sequence represents the human subtilisin protein. The invention relates to a machod of reducing the allergenicity of a non-human protein, especially a bacterial protease such as subtilisin (AAV6980), by Identifying an epitope on the non-human protein and replacing it by an analogous region from the human protein. The method is useful for producing proteins, including proteases, that are less likely to cause allergic reactions. Thus the invention can be employed for example in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         loyed for example in food industries.                     The specification describes a method for identifying modulators of a sterol-regulated Site-1 protease. Site-1 protease cleaves sterol regulatory element binding proteins (SREBPS) in the endoplasmic reticulum, initiating release from membranes and activating lipid synthesis. The modulators therefore also modulate cholesterol and fatty acid biosynthesis. The method comprises selecting an agent capable of down regulating Site-1 protease and formulating a composition comprising the agent. The site-1 protease inhibitors are useful for treating a patient for elevated serum cholesterol. Diseases treated include hypercholesterolemia and other lipid metabolism associated conditions. The present sequence represents a human site-1 protease.
                                                                                                                                                                                                                                                                                                                                                                                                                                          300

This sequence represents the human subtilisin. The invention relates to protease variants comprising a substitution at least invention relates to protease variants comprising a substitution at least of the positions in a precursor protease corresponding to KI70D, XI71Q and/or SI73D of the Bacillus amyloliquefaciens subtilisin. The protease corresponding to AI70D, AI71Q and/or SI73D of the Bacillus amyloliquefaciens subtilisin. The protease corresponding to a cleaning solutions, in animal feed and for treating textiles corrected felling. The protease variant may also be used for peptide hydrolysis, waste treatment, cosmetic (e.g. skin care) competitions, or as fusion-cleavage enzymes in protein production. The protease walch contain epitopes responsible for initially sensitising an individual may be identified by measuring the proliferation of I-cells due to I-cell epitope recognition.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Subtilisin; protease variant; precursor protease; cleaning composition; detergent; liquid scap application; dish-care formulation; animal feed; contact lens cleaning solution; peptide hydrolysis; waste treatment; cosmetic formulation; fusion-cleavage enzyme; protein production.

The invention relates to a variant of a polypeptide of interest comprising an altered T-cell epitope to produce a different immunogenic response. A method for altering the immunogenicity of a protein especially an enzyme, a hormone, a factor, a vaccine, or cytokine is described. The protein produces an immune response as desired and is useful in therapeutics, vaccines and in forming hyper and hypo-allergenic compounds, e.g. cleaning compositions, textile treatments, contact lens cleaning solutions, waste treatment products and cosmetic formulations. Unlike antibody assays, the method determines immune sensitivity to an epitope prior to any sensitisation taking place. AAU38518-AAU38742 represent the amino acid sequences of Bacillus lentus savinase and human subtilisin (BPN) T-cell epitopes, and related amino acid sequences as described in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        240

The invention relates to human site-1 protease (SIP) promoter region. The promoter sequence is useful for identification of compounds that inhibit transcription of SIP, which in turn results in inhibition of SIP, which in turn results in inhibition of SIP, which in turn results in inhibition of SIP, which is the compound identified is useful for the treatment of medical conditions related to obesity, type II diabetes, hypercholesterolaemia, dyslipidaemia, atherosclerosis and other cardiovascular diseases. The present sequence is human site-1 protease.
                                                                                                                                                                                                                                                                                                                                                                                                       1 MKLVNIWILILLVVILLCGKKHLGDRIEKKSFEKAPCPGCSHLTLKVEFSSTVVEYEYIVAF
